                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       600
cellular stress response. It can: regulate oxidative stress; inhibit neurite outgrowth, neuron growth and axon regeneration. Nogo B polypeptides and polynucleotides are useful for modulating stress levels and callular stress-response, cell growth and viability, diagnosis and treatment of cancer, malignant growth and other Nogo B related diseases. Nogo B polypeptides are also useful to screen combinatorial libraries to identify agonist or antegonist. Antibodies against Nogo B polypeptides are useful for affinity chromatography and distinguishing Nogo B
                                                                                                                                                                                                                                                          9

ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer in a patient and compositions comprising polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells expressing the polypeptide are useful in treating pancreatic cancer and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid hybridisation, in the design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proteins in the tumour cells, in vaccines and for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                           121 ATCTCCACCCTCCAGCCATGGAAGACCTGGACCAGTCTCCTCTGGTCTCGTCCTCGGACA 180

EACE polypeptides capable of binding with each other, monitoring the interaction between these polypeptides, and determining if the test agent is a modulator of Nego or BACE activity. The method is useful in treating acute neuronal injuries, such as spinal or head injury. Stroke, peripheral nerve damage, and in neoplastic (e.g. glioblastomas, curvolation) injuries, such as spinal or head injury stroke, corresponding the projection of disportive disporders (e.g. pripheral nerve damage, and in neoplastic (e.g. glioblastomas, curvolation) in screening methods to identify agents that may act as modulators of BACE activity and in particular agents that may act as modulators of BACE activity and in particular agents that may be useful in treating Nogo-associated diseases. The modulators of Nogo or BACE polypeptides, and the polymoleotide encoding the BACE polypeptide are useful in manufacturing a medicament for the treatment or prevention of disorders responsive to the modulation of Nogo activity, in alleviating the condition of a patient suffering from this disorder, in axon regeneration, or in preventing metastasis or spreading of a cancer. The polymucleotide may also be an essential component in assays, a probe, in recombinant protein synthesis, and in gene therapy techniques. The present nucleic acid sequence encodes the human NogoB protein of the invention 191 120 251 180 311 240 371 300 431 360 491 420 480 611 131 551 9 GAGGAGGAAGGAGGACGACGACGAACCTGCAGGAGCTGCAGGTGCTGCAGAAG GCGGCTCTGAGACGCGGCCCCGGCGGCGGCGGCAGCAGCTGCAGCATCATCTCCACCCT CCAGCCATGGAAGACCTGGACCAGTCTCCTCTGGTCTCGTCCTCGGACAGCCCACCCCGG CCAGCCATGGAAGACCTGGACCAGTCTCCTCTGGTCTCGTCCTCGGACAGCCCACCCGG CCGCAGCCCGCGTTCAAGTACCAGTTCGTGAGGGAGCCCCGAGGACGAGGAGGAAGAAGAG 121 CCGCAGCCCGCGTTCCAAGTACCAGTTCGTGAGGAGCCCGAGGACGAGGAAGAAGAGAG GAGGAGGAAGAGGACGACGACGACGACCTCGAGGAGCTGGAGGTGCTGGAGAGGAAG CCCGCCGCCGCCTGTCCGCGGCCCCAGTGCCCACCGCCCCTGCCGCCGCGGCGCGCCCCTG 241 CCCGCCGCCGGGCTGTCCGCGCCCCCAGTGCCCACCGCCCCTGCCGCCGCCGGCGCCCCTG CCCGTCGCCCCGGAGCGCCGTGTTGGGACCCCGAGCCCGGTGTCGTCGACCCCC GCGCCATCCCCGCTGTCTGCTGCCGCAGTCTCGCCCTTCAAGCTCCCTGAGGACGAG GCGCCATCCCCGCTGTCTGCCGCAGTCTCGCCCTCCAAGCTCCCTCAGGACGACGAG CCTCCGGCCCCGGCCTCCCCCCCGGCCAGCGTGAGCCCCCAGGCAGAGCCCGTG CCCGTCGCCCCGGAGCGGCAGCCGTCTTGGGAACCCGAGCCCGGTGTCGTCGACCGTGCCC 2; Indels 110; Gaps 84.5%; Score 1892.8; DB 6; Length 2052; 94.8%; Pred. ```
AAZ36228-49 encode bone marrow secreted proteins of human bone marrow stromal cells. The proteins can exhibit cytokine, cell proliferation, or stromal cells. The proteins can exhibit cytokine, cell differentiation activity (either inducing or inhibiting). They can be used to support colony forming cells and to treat myeloid or lymphoid cell lines, to regulate hematopoiesis, and to treat myeloid or lymphoid cell canemias. They can have colony stimulating factor (CSF) activity and can be used to support the growth and proliferation of farythroid progenitor cells, and to treat various can suppression, to support the growth and proliferation of megakarycoytes and platelets, thereby allowing prevention or treatment of platelet disorders such as thrombocytopenia, to support the growth and proliferation of hematopoeitic stem cells, either in place of or in conjunction with platelet transfusions, to support the growth and conjunction with platelet transfusions, to treat stem cell disorders conjunction with platelet transfusions, to treat stem cell disorders conjunction with platelet transfusions, to treat stem cell disorders conjunction with platelet transfusions, to treat stem cell disorders. They can be used for growth or differentiation of bone, cartilage, tendon, ligament, or nerve tissue, as well as for wound healing and tissue repair and replacement, and in the treatment of burns, incisions and ulcers, to induce cartilage and/or bone growth in circumstances where the conferce cartilage and/or bone growth in circumstances where the conferce and cartilage and/or bone growth in circumstances where the conferce and cartilage and/or bone growth in circumstances where the conferce and cartilage and/or bone growth in circumstances where the conferce and cartilage and/or bone growth in circumstances where the conferce and cartilage and or prompty and platelet to the improved fixation of artificial joints
New isolated human polynucleotide and secreted proteins can induce
                                                              production of other cytokines in certain cell populations

Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length cDNA are useful length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  their use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               154

This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polynucleotide sequence is a full length human cDNA clone of the invention.

```
This invention describes novel mucleic acid molecules that are associated with apoptosis and encode a polypeptide and are derived from a normalised come library (embryonic or liver) or clone collections, and the extent of apoptosis measured by cell death detection assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay or the CPRG assay anticheumatic, anticherulash, anticheumatory, hepatotropic, anticheumatic, anticherulash, antichellammatory, hepatotropic, virucide, cerebroprotective and antialcoholic activity and can be used for therapy. The polymucleotides also related vectors, hosts (or their extracts), encoded polypeptide (or their receptors) and/or agents that characterize activity (including antisense sequences) are used for inhibit their activity (including antisense sequences) are used for treatment or prevention of tumours, autoimmune or degenerative diseases and viral infections, specifically leukaemia, carcinoma, sarcoma, with hepatitis or influenza viruses, Alzheimer's, Huntington's or Epatkinson's diseases, reperfusion injury, stroke and alcoholic liver diseases. Detection of the polynucleotides and derived polypeptides can apoptosis-associated protein described in the disclosure of the invention.

This invention relates to a novel method for modulating the expression of a target gene in a cell. Specifically, it refers to the introduction into a call of a polynucleotide that forms a duplex region with an mRNA transcribed from the target gene, where the duplex region comprises a manmalian miRNA target region i.e. a non-coding microRNA (miRNA) that required manmalian miRNA at a post-transcriptional level. The present invention describes a method for controlling ontogenesis of a mammali, function of a mammalian cell, differentiation of a mammalian cell or viability of a mammalian cell in the post-transcriptional phase, which comprises of introducing a plasmid vector comprising a promoter and nucleic acid concerningly, it provides a cell therapy method for treating cancer, immune disease, nerve disorder (e.g. amyotrophic lateral sclerosis, parkinson's disease, or Alzheimer's disease) or an inflammatory disease by introducing into the cell the miRNA, siRNA silencing precursor to the miRNA or the plasmid vector. As such, they can be developed into miRNA or the plasmid vector. As such, they can be developed into the miRNA or the plasmid vector. As such, they can be developed into contropic, neuroprotective and anti-inflammatory activities and hence can be used for immunotherapy. This polynucleotide sequence is a human target gene whose expression is modulated by miRNAs of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3616
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1112

                                                                                                                                                                                                          The invention relates to a combination comprising a number of substantially purified and isolated polynucleotides which are co-expressed with genes known to be involved in bone remodelling and osteoporosis. The invention is used to diagnose disorders associated with bone remodelling or osteoporosis. ABS70344-ABS70512 represent human bone remodelling genes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              812
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       932
A combination of polynucleotides which are co-expressed with genes known to be involved in bone remodeling and osteoporosis are useful in an array for the diagnosis of bone remodeling and osteoporosis associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 872

The present invention relates to a new method of identifying modulators of Nogo function or BACE activity. The method involves providing Nogo and BACE polypeptides, and other, monitoring the interaction between these polypeptides, and determining if the test agent is a modulator of Nogo or BACE activity. The method is useful in treating acute neuronal injuries, such as spinal or head injury, stroke, peripheral nerve damage, and in neoplastic (e.g. glioblastomas), hyperproliferative or dysproliferative disorders (e.g. cirrhosis, psoriasis, keloid formation, fibrocystic conditions, tissue typertrophy) of the central nervous system. The BACE polypeptide is useful in screening methods to identify agents that may be useful in treating of BACE activity and in particular agents that may be useful in treating of nogo-associated diseases. The modulators of Nogo or BACE polypeptides, and the polynucleotide encoding the BACE polypeptide are useful in manufacturing a medicament for the treatment or prevention of disorders responsive to the modulation of Nogo activity, in alleviating the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying modulators of Nogo or BACE activity for treating acute neuronal injuries, neoplastic or dysproliferative disorders, comprises providing and monitoring interaction between Nogo and BACE polypeptides.
                                                                                                                                                                                   Human; Nogo; BACE; acute neuronal injury; spinal injury; head injury; stroke; peripheral nerve damage; neoplastic disorder; glioblastoma; neuroblastoma; hyperproliferative disorder; dysproliferative disorder; cirrhosis; psoriasis; keloid formation; fibrocystic condition; cancer; tissue hypertrophy; central nervous system; axon regeneration; NogoC; Nogo-associated disease; metastasis; gene; ds.

The invention relates to 625 polymucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridse to them. Also included are a vector comprising the polymucleotide, a host cell cansiformed with the vector, the proteins encoded by the polymucleotides antibodies that bind to the proteins encoded by the polymucleotides of the proteins or the expression of the polymucleotide. The polymucleotides can be used as probes for the identification and isolation of full length can be used as probes for the identification and isolation of full length as nutritional supplements. The protein is useful in the treatment of various immune deficiencies and disorders such as viral infections, tungal infections, autoimmune thyroiditis and cheumatoid arthritis, multiple sclerosis, autoimmune thyroiditis and disease, and allergic reactions and conditions (e.g. asthma). They are also useful for treating neurodegenerative diseases (e.g. Asthmaer's disease) and tumours. They are also useful for tissue regeneration, for wound healing and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating haematopolesis, for treating myeloid or light of the 625 cDNA lympholo cell deficiencies. The present sequence is one of the 625 cDNA human tissue sources which encode secreted proteins, useful for treating immune deficiencies and disorders such as autoimmune disorders. WPI; 2001-367020/38. P-PSDB; AAE03939 Nucleic acids encoding 50 human secreted polypeptides, useful for preventing, diagnosing and/or treating diseases, e.g. Parkinson's disease, botulism, cancers and Scimitar syndrome.

Claim 1; Page 520; 614pp; English

The genes and their secreted proteins are useful for preventing, treating or amellorating medical conditions, e.g., by protein or gene therapy.

Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 50 genes, cancer timeous, foetal and developmental abnormalities, disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, conversional disorders (e.g., Alzheimer's disease, Parkinson's disease), comitive disorders (e.g., Alzheimer's disease, parkinson's disease), comitive disorders, schizophrenia, asthma, skin disorders (e.g., angiogenic disorders, kidney disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proteins can also be used to aid wound healing and epithelial cell confidential and proteins can also be used to aid wound healing and epithelial cell confidential confidence transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding AAD08345-AAD08394 represent cDNAs corresponding to 50 human secreted protein genes and AAE03898-AAE03947 represent the proteins they encode. The invention relates to an isolated polynucleotide (I) comprising: (a) any of a group of over 4000 nucleotide sequences (ABV94620-ABV99145); (b) complements of (a); (d) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under moderately traingent conditions; (e) sequences having at least 75% or 90% identity to (a); or (f) degenerate variants of (a) Polypeptides (ABP68596-ABF68637) encoded by (I) and oligomucleotide can be used to detect cancer in a patient and compositions comprising polypeptides, polynucleotides, antibodies, fusion proteins, r cell populations and antigen presenting cells expressing the polypeptide are useful in treating pancreatic cancer and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid hybridisation, in the design and proteins in the tumour cells, in vaccines and for gene therapy. Note: The sequence data for inhibiting expression of the tumour cells, in vaccines and for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and pancreatic tumor polypeptides, useful f
diagnosing, preventing and/or treating cancer, particularly pancreatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GAGGAGTTGGTTCAGAAGTACAGTAATTCTGCTCTTGGTCATGTGAACTGCACGATAAAG

This invention relates to novel methods for diagnosing and monitoring autoimmune and chronic inflammatory diseases. Specifically, it refers to the identification of genes that have a clinical utility as diagnostic cools for the management of, in particular, patients with systemic lupus erythematosis (SLE) or rheumatoid arthritis (RA). Accordingly, the present invention describes a method for determining the levels of multiple differentially expressed genes of a patient, in order to achieve an improved diagnostic assay with sensitivity manner, in order to achieve an improved diagnostic assay with sensitivity and specificity for the diseases in question. As such, these genes are useful for the diagnosis of various other inflammatory disorders including cholecystitis, Sjogren's disease, CREST syndrome, scleroderma, ankylosing spondylitis, ulcerative colitis, primary sclerosing cholangitis, appendicitis, diverticulitis, and primary biliary sclerosis. This polynucleotide is a DNA sequence representing human mRNA that is differentially expressed in patients with SLE, used in an exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CTATTCCTGCTGCTTTCATTGACAGTATTCAGCATTGTGAGCGTAACAGCCTACATTGCC 3273

1st strand coNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand coNA was digested with Not I and cloned
into the Not I and ECOR V sites of the pCWVSPORT 6 vector. Library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AL573494 BY5 bp mRNA linear EST 06-APR-2004

Five prime end enriched, double-strand CDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
